DIVIDED GLASS

In physics, refraction is the redirection of a wave as it passes from one medium to another. As light passes through air and into another clear material (such as glass), it changes speed, and light is both reflected and refracted by the glass.

The Divided Glass Collection depicts this refraction of light, coinciding with the shadows casted through architectural glass divisions. The luminescence passing through differing textured glass surfaces results in an emblem of amorphous hues with soft transitions.

GLIMMER

Glimmer is the large scale pattern depicting the refraction of light and passing through glass.

Shadows dance with bright highlights, dark shutters with glimmering panes, slicing verticals with syncopated diagonals.

CARBON OFFSET PROGRAM

DIVIDED GLASS

A CARBON OFFSET COLLECTION

Climate change is one of the greatest threats facing humanity. Today, our carpet, LVT and entryway tiles are carbon neutral everywhere in the world. We invite you to learn more about the significant changes we've made, then let's work together to design a better future.
